

# FRIEDERIKE FABRITIUS

NEUROPSYCHOLOGIST  
AUTHOR · KEYNOTE SPEAKER

## Tech setup for virtual speaking engagements

- I have a Newtech trcaster 4k which allows me to stream and record in high definition (let me know in advance if you need 4K)
- 2 Sony cameras
- Greenscreen
- Rode Wireless go for keynotes and Rode NTUSB microphone for podcasts
- Compatible with all relevant event platforms as well as teams, zoom, google meet
- In case the event runs on Webex we need to work with an alternative setup – please let me know in advance
- I'm able to record on my own as a MP4 and can provide a high-definition file using Microsoft OneDrive
- I don't need the "share screen" function as my system allows me to place my presentation next to me as you would see it in a TV show. So I don't have the talking head next to a big presentation. If you put me into the "spotlight", you will see me in front of / next to the presentation
- I use a mix of PowerPoint, Ipad live scribes and videos as works best for the keynote and can switch seamlessly in between the different setting with my Elgato switchboard.
- The internet runs via cable, no WIFI to ensure a stable connection
- If you want to see how my setup looks like, check out this video:
